

## Course Description

This course is part of a series of courses developed and offered by GridEd to address several evolving forces that will alter the fundamental operating characteristics of the electric grid, transforming it from a one-way central supply structure to one that has bidirectional, flexible power flows resulting from the integration of energy storage systems. This course focuses on energy storage technologies and applications for transmission

## Registration Information

Registration: <http://grided.epri.com/courses.html>

Dates: Thursday, February 8, 2018

operations. Students will include utility engineers and technicians, procurement officers, regulatory compliance staff, legal staff, and possibly regulators. Previous technical training is helpful but not necessary.

(non-utility)

25% discount for university professors\*

75% discount for graduate students\*

\*University IDs required to qualify for professor or graduate student discounts.

## Meet the Instructors

has over 10 years experience in electric power RD&D. He currently manages research efforts pertaining to energy storage, distributed energy resources (DER), and microgrids. He manages EPRI's Energy Storage Integration Council (ESIC), a deployment-oriented public, technical forum with a mission to advance integration of safe, reliable, cost-effective energy storage systems. Ben works collaboratively with industry to develop analytical tools and methods to understand the value of energy storage and DER, including the Storage Value Estimation Tool (StorageVET). He serves on the board of the Energy Storage Association. Prior to EPRI, Ben worked with Tesla Motors and other early stage companies to develop novel technology, test, and commercialize advanced batteries for vehicle electrification. Ben earned a BS in Systems Engineering from the University of Illinois and an MS in Management Science & Engineering from Stanford University.

is an Engineer Scientist for the Energy Storage Program at the Electric Power Research Institute (EPRI), managing projects related to integrating energy storage assets into the utility grid. Erin has previous experience in developing commercial behind-the-meter and utility distribution-connected energy storage systems for an engineering, procurement, construction (EPC) firm. She also has 7 years of experience as a power systems engineer implementing projects to drive reliability and efficiency improvements, including transmission and distribution upgrades, microgrids, renewable energy, and energy storage. Erin is a registered Professional Engineer in the state of California and has a BS and MS in Electrical Engineering from California Polytechnic State University, San Luis Obispo.

### Course Outline

#### Day 1 Energy Storage Technology and Application Overview

- **Introduction to Energy Storage**
  - o Drivers
  - o Introduction to Value and Uses
  - o Remaining Challenges
- **Energy Storage Technologies**
  - o Technical Overview of Storage Technologies
  - o Battery Energy Storage System Components
  - o Moving from Technology to Deployment
- **Value Analysis for Energy Storage**
  - o Cost and Value Metrics
  - o Bulk Storage Applications
  - o Utility Distribution Applications for Energy Storage
  - o Customer-Sited Applications for Energy Storage
  - o Basic Training for Value Analysis of Storage
- **Regulatory and Policy Considerations**
  - o Utility business structures
  - o Federal Policy – Legislation and Regulation
  - o State Policy
  - o Public Utility Commissions rulings

#### Day 2 Energy Storage Deployment Considerations

- **Overview of Energy Storage Project Life Cycle**
  - o Planning
  - o Procurement
  - o Deployment and Integration
  - o Operations and Maintenance
  - o Decommissioning and End-of-Life
- **Safety**
- **Lessons Learned and Resources for Further Learning**

December 2017
